## EXHIBIT B

### OU 3 RFI/RI SAMPLING ACTIVITY DESCRIPTIONS -BALL CORPORATION

The planned OU 3 sampling activities are detailed in the RFI/RI Work Plan. The Work Plan outlines the purpose, objectives, rationale and methods used to evaluate the presence or absence of contamination within OU 3. The Work Plan is based on the requirements of the Interagency Agreement (IAG) between the Department of Energy (DOE), the Environmental Protection Agency (EPA) and the State of Colorado Department of Health (CDH).

OU 3 sampling activities began in April, 1992 and are scheduled for completion by spring of 1993. A Final RFI/RI Report which details the results and conclusions from this study is scheduled for completion in January, 1994. The Access Agreement period is extended for three years to cover any follow up activities that may be required during development of the Final RFI/RI Report.

The map, attached to this correspondence, shows locations of sampling activities. Sample locations will be surveyed prior to the sampling event. Field adjustments could be made at the time of sampling to adjust specific sampling locations.

Sampling activities will not adversely effect environmental resources. OU 3 sampling activities on Ball Corporation property involve collection of soil data. The collection of surface soil samples involves removing one quarter to one half inch of surface soil from a 3 X 3 inch square in 25 locations within a ten acre plot. The ten acre plot locations are shown on the Exhibit A map.
